

# Making **ExtremePower™** Flow Improvers Work for You

*ExtremePower™ Flow Improvers are proven to increase deliveries of produced heavy crude oil to market.*

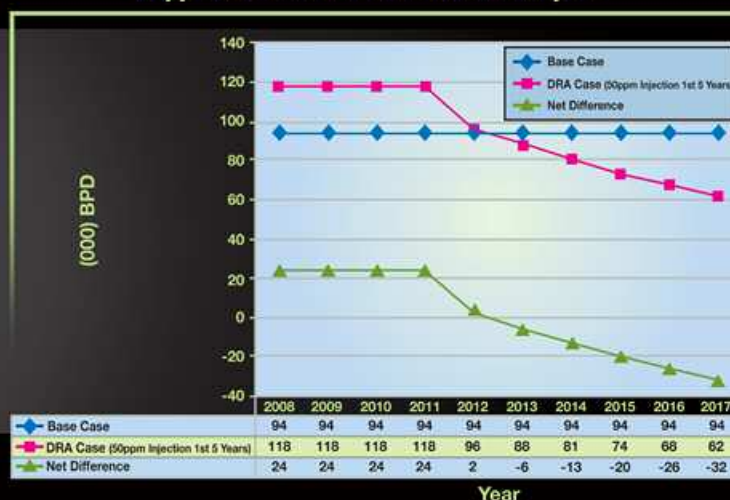

| Crude Oil Sample                | LiquidPower™ Flow Improver Compatibility | ExtremePower™ Flow Improver Compatibility | API Gravity |
|---------------------------------|--|---|-------------|
| West Texas Intermediate         | High                                     | Moderate                                  | 41.6        |
| West Texas Sour                 | High                                     | Moderate                                  | 31.6        |
| Basrah                          | High                                     | Moderate                                  | 31.0        |
| Corocoro                        | None                                     | High                                      | 25.1        |
| Albian                          | None                                     | High                                      | 22.4        |
| Marlim Blend                    | High                                     | High                                      | 22.2        |
| Maya                            | None                                     | High                                      | 21.9        |
| Bow River                       | None                                     | High                                      | 21.8        |
| Apiay                           | Moderate                                 | Moderate                                  | 21.8        |
| WCS (Western Canadian Select)   | None                                     | High                                      | 20.9        |
| Castilla                        | None                                     | High                                      | 18.0        |
| Merey                           | None                                     | High                                      | 16.0        |
| SJVH (San Joaquin Valley Heavy) | None                                     | High                                      | 13.0        |
| Petrozuata                      | None                                     | High                                      | 9.1         |

The successful application of ExtremePower™ Flow Improvers requires a transition or turbulent flow regime, heavy crude oil/DRA polymer compatibility, and a suitable pipeline system configuration.

*Increase deliveries of produced heavy oil to market NOW by utilizing ExtremePower™ Flow Improvers.*
